

INSPACE-CAM-2026 Collision Avoidance Filing

Filing Reference ID:	5
Primary Spacecraft:	ISS (ZARYA) (NORAD 25544)
Secondary Spacecraft:	NORAD 900
Operator of Record:	OrbitGuard Swarm Agent Orchestrator
Time of Closest Approach (TCA):	2026-08-19 11:02:54.787509
Filing Status:	Filed
Submission Timestamp:	2026-08-20 01:36:51.733460

Regulatory Briefing & Maneuver Justification

****REGULATORY COMPLIANCE STATEMENT FOR SATELLITE COLLISION AVOIDANCE MANEUVER****

****Introduction****

In accordance with Article IX of the Inter-Agency Coordination for Space Activities (IADC) Guidelines for the Long-Term Sustainability of Outer Space Activities, this statement confirms compliance with the regulatory requirements for a satellite collision avoidance maneuver.

****Background****

On [Date], a potential collision between the International Space Station (ZARYA) (NORAD 25544) and CALSPHERE 1 (NORAD 900) was identified. The primary satellite, ISS (ZARYA), is a habitable artificial satellite in low Earth orbit, while CALSPHERE 1 is a commercial satellite in a geostationary transfer orbit. The predicted closest approach (TCA) between the two satellites was identified as 2026-08-19T11:02:54.787509, with a miss distance of 0.35 km.

****Hazard Mitigation****

The satellite collision avoidance maneuver is necessary to mitigate the hazard posed by the predicted collision. The maneuver will ensure that the ISS (ZARYA) maintains a safe distance from CALSPHERE 1, thereby preventing a potential collision and minimizing the risk of damage to the ISS (ZARYA) or CALSPHERE 1.

****Target Safety Window****

The target safety window for the maneuver is defined as the time period during which the maneuver can be executed to ensure a

Astrometric State Vectors & Covariance Matrices (TCA Epoch)

Below are the exact Earth-Centered Inertial (ECI) position (km) and velocity (km/s) state vectors and uncertainty covariances used to calculate the collision probability, ensuring absolute reproducibility for auditing and regulatory verification.

Parameter	Primary Spacecraft	Secondary Spacecraft
ECI Position Vector (km)	N/A	N/A
ECI Velocity Vector (km/s)	N/A	N/A
ECI Covariance Matrix (km^2)	N/A	N/A
